

**Laser Lipo techniques use safety laser, radiofrequency, ultrasound to reduce fat. Devices are applied directly to the skin of the treatment area and are not used for injections or incisions.**

**Ultrasound Cavitation is a process where the power of ultrasound naturally breaks down the fat cells in a localized area of treatment and then allows the body to naturally move the fat, fat cells, and toxins from the area out through the body's natural detoxification process and lymphatic system.**

**Red light therapy (RLT) is an emerging treatment that's showing promise in treating wrinkles, redness, acne, scars and other signs of aging.**

**Wood therapy uses a number of different wooden massage-like tools to help break down fat and cellulite. The wooden instruments are used to apply direct pressure to "problem areas" and essentially naturally eliminate excess body fat.**

**Radiofrequency (RF) therapy involves using energy waves to heat the deep layer of your skin known as your dermis. This heat stimulates the production of collagen. Collagen is the most common protein in your body.**
